-----------------------	-------------------------------	----------------	--------------------------	---------------------------------

India's most advanced integrated BESS manufacturer-EPC-BOO platform — transitioning from a telecom infrastructure executor into a clean energy company with an Rs. 11,338 Cr order book (4.3x FY26 revenue), 10 GWh manufacturing capacity by October 2026 (largest in India), and management revenue guidance of Rs. 3,200–3,400 Cr for FY27E (+21–29% YoY). The stock is priced at 12.5x FY27E EPS on telecom-EPC multiples while the business is structurally becoming an energy manufacturer deserving 18–22x. Enter before the re-rating.

FY26 REVENUE Rs. 2,641 Cr +8.3% YoY	FY26 PAT Rs. 307 Cr +10.1% YoY PAT Mgn 11.4%	ORDER BOOK (MAY-26) Rs. 11,338 Cr 4.3x FY26 Revenue	BESS CAPACITY (OCT-26E) 10 GWh From 2.5 GWh in FY26
---	--	---	---

01 INVESTMENT SUMMARY

Business Model. Pace Digitek operates across two verticals: (a) Telecom & ICT — towers, OFC, Railways, O&M (54.6% of FY26 revenue); and (b) Energy — BESS manufacturing, EPC, and BOO (45.4%). Through subsidiary Lineage Power, Pace manufactures cell-to-pack-to-container BESS systems at Bidadi, Karnataka. It operates a three-mode energy monetization model: Supply (12–14% EBITDA margin), EPC (7–10%), and BOO — Build-Own-Operate at 13–14% equity IRR.

Why BUY. (1) Rs. 11,338 Cr executable order book = 4.3x revenue cover with PSU counterparties (MESDCL, KREDL, NTPC, SECI, BSNL). (2) Manufacturing capacity 4x from 2.5→10 GWh by Oct-26 — no other Indian company is at this scale. (3) Finance cost halved post-IPO (Rs. 115 Cr → Rs. 60 Cr); credit rating upgraded BBB- → A-. (4) L&T switched from Chinese BESS to Pace (250 MWh order, Jan-26) — the strongest competitive validation in the market.

Snapshot: Order Book by Segment (May-26)

Energy BOO (Rs. 4,433 Cr)	39.1%
Energy EPC (Rs. 4,421 Cr)	39.0%
Telecom EPC + O&M (Rs. 2,040 Cr)	18.0%
Telecom Supply + Others (Rs. 444 Cr)	3.9%

Key Energy Clients: KREDL (Rs. 1,775 Cr), MESDCL (Rs. 1,258 Cr), SECI-EPC (Rs. 1,159 Cr), MAHAGENCO (Rs. 920 Cr), SECI-BOO (Rs. 700 Cr), KPTCL (Rs. 700 Cr), NTPC (Rs. 584 Cr). Telecom anchor: BSNL (Rs. 1,500 Cr). Book-to-Bill: **4.3x**.

♦ ANALYST TAKEAWAY

What the data shows: Rs. 11,338 Cr OB at 4.3x cover; 10 GWh capacity by Oct-26; FY26 PAT Rs. 307 Cr (+10.1%) despite a heavy capex/investment year; finance cost relief from A-rated balance sheet.

Investor implication: The market prices Pace as a telecom EPC company (~12x P/E). The business is becoming an energy manufacturer (peers: 20–35x). The 8–20x multiple gap is the source of upside to Rs. 230.

02 WHY NOW? — NEAR-TERM CATALYST MATRIX

Catalyst	Timeline	Earnings Impact	Valuation Impact
5 GWh line commissioning	Jul-26 (Q1 FY27)	Doubles throughput; 80% utilisation target by FY27-end; Rs. 1,200 Cr/GWh revenue potential.	Re-rating trigger: "EPC company" → "manufacturer." Manufacturing peers command 20–30x P/E.
10 GWh capacity achieved	Oct-26 (Q2 FY27)	At 75–80% utilisation, 10 GWh alone supports Rs. 9,000–10,000 Cr annual run-rate (FY28+).	Monopoly-like positioning in India — no other individual company at this scale. Bid moat widens.
In-house container fabrication	Jul-26	4–5% operating efficiency gain (mgmt guidance). Eliminates 30% import overhead cost on containers.	100–150 bps EBITDA margin expansion potential as manufacturing mix rises.
Order book revenue recognition	FY27–FY28	Standalone BESS EPC: 1.5–2 yr execution. More even quarterly distribution guides H1 FY27 stronger than H1 FY26.	Every Rs. 1,000 Cr executed at 11% PAT = Rs. 110 Cr PAT addition — direct EPS accretion.
BOO annuity income ramp	FY27 (MSDCL live)	MSDCL alone contributes Rs. 800–1,000 Cr revenue in FY27 (lease model). Govt pays Rs. 2.19 lakh/MW/month. Three of four BOO projects funded internally.	Long-term contracted cashflows attract infrastructure multiples — annuity value not priced in CMP.
C&I BESS + NEC Africa	Q1 FY27 onwards	State mandates (MH, GJ, RJ) for BESS on solar ≥50 MW open private demand. NEC Africa: 300–500 MWh orders FY27 expected.	New market / geography = revenue diversification premium. C&I supply margin 12–14% vs EPC 7–10%.

♦ ANALYST TAKEAWAY — WHY NOW

Why not wait: Entering after the 10 GWh milestone (Oct-26) and Q2 FY27 results risks missing 15–20% of the move. The re-rating happens as catalysts materialise, not after they are reported.

Risk/reward at Rs. 189: Bull case Rs. 336 (+78%), base case Rs. 230 (+22%), bear case Rs. 130 (–31%). Probability-weighted EV clearly favours long entry at current price.

03 COMPANY OVERVIEW

History & Pivot. Incorporated 2007 as Pace Power Systems. Entered telecom infrastructure 2011; acquired Lineage Power (formerly GE Power Electronics India) in 2014 — anchoring the manufacturing platform. Won landmark BSNL 4G Saturation Project (Rs. 7,568 Cr, 9,595 sites) in FY23. Listed on BSE/NSE in FY26 raising Rs. 819 Cr. Commissioned BESS manufacturing facility at Bidadi, Karnataka in FY26, delivered 178 BESS containers — a record by any Indian company.

Revenue Mix Evolution. Energy was ~5.6% of FY25 revenue. By FY26, it grew to 45.4% of revenue (Rs. 1,198 Cr) and 78.1% of order book — a structural re-architecture in 24 months. Telecom & ICT still 54.6% of FY26 revenue (Rs. 1,443 Cr) but is becoming the "steady base" while energy drives growth.

Manufacturing. Three Karnataka facilities: (1) Kumbalgodu — Telecom Infra equipment (10,944 unit capacity); (2) Kumbalgodu — Li-ion Batteries & PCS (21,590 units); (3) Bidadi — BESS Containers (2.5 GWh → 10 GWh by Oct-26). In-house container fabrication being added (Jul-26) for cost & logistics control.

Competitive Positioning. Among very few Indian companies with full BESS vertical integration: cell-to-pack-to-container, integrated PCS & EMS, grid-scale EPC, BOO asset ownership, and cloud NOC monitoring. Chairman's concall statement: *"There is no other company which has manufactured 178 containers within India."* L&T's switch from Chinese BESS to Pace is the strongest third-party validation — after completing their evaluation and validation process (250 MWh order, Jan-26).

Customers. Government-dominated: BSNL (telecom), MESDCL, KREDL, KPTCL, SECI, NTPC, NLC India, DVC (energy). Private: L&T (BESS), Tata Teleservices (O&M), Reliance Jio (supply). Top 3 customers = ~89% of FY25 revenue — concentration reducing as energy adds new PSU clients. Average customer tenure 4–6 years (top customers).

Geographic. India >95%. International: South Africa, Myanmar (telecom). Expanding: NEC XON partnership for Africa BESS from FY27; Saudi Arabia and Kenya targeted per investor presentation.

04 INDUSTRY OVERVIEW

BESS — Structural Demand. India BESS capacity additions: ~7 GW (FY27E) → ~47 GW (FY32E) per National Energy Policy (NEP 2023). Battery storage costs have fallen ~90% over the past decade — grid-scale BESS is now economically viable. MoP has tendered large BESS capacity via SECI, MESDCL, NTPC, NLC, and state DISCOMs. VGF of ~Rs. 27 lakhs/MWh de-risks project economics for BOO developers.

Policy Tailwinds. National Electricity Policy 2026 and Make-in-India initiatives actively favour domestic BESS manufacturers. ALMM framework for BESS expected to create a "buy domestic" mandate. State-level mandates: Maharashtra, Gujarat, Rajasthan require BESS for solar ≥50 MW — opening a massive C&I market where Pace has certifications ready (Q1 FY27).

Telecom Infra. India telecom tower count projected to grow from ~805,000 (FY24) to 1.0–1.035 million by FY28P (CRISIL) driven by 5G densification, BSNL 4G network expansion, Railway Kavach safety system, and OFC rollout (BharatNet). Passive telecom infrastructure market size estimated at Rs. 2,000–2,100 billion cumulatively through FY28.

Why Pace Specifically Benefits. Unlike pure EPC players, Pace's integrated manufacturing (a) enables competitive bidding while maintaining margins; (b) accelerates execution using in-house supply chain; (c) captures value across the full BESS lifecycle: manufacturing → EPC → BOO → O&M; and (d) leverages 18+ year government relationships built in telecom for BESS order acquisition — a distribution moat that new entrants cannot replicate quickly.

05 INVESTMENT THESIS — FIVE PILLARS

1 Order Book Visibility — 4.3x Revenue Cover

Rs. 11,338 Cr executable OB vs. Rs. 2,641 Cr FY26 revenue. All from PSU counterparties with contractual commitments. Execution 1.5–2.5 years per project type. FY27 and FY28 revenues are largely locked in — this is an execution story, not a new-order-dependency story.

Book-to-Bill: 4.3x | Execution: 1.5–2.5 years

2 Operating Leverage — Manufacturing Scaling

2.5 GWh (FY26, 80% utilisation) → 10 GWh (Oct-26). Fixed overhead stays nearly constant as throughput 4x. In-house container fabrication adds 4–5% margin improvement. Manufacturing revenue carries 12–14% margins vs. EPC 7–10% — mix shift = margin expansion from FY28.

Container savings: 4–5% | Mfr margin: 12–14%

3 Execution Proof — Q4 FY26 Breakout Quarter

Q4 FY26 revenue Rs. 1,097 Cr (+60.5% YoY) — strongest quarter ever. EBITDA Rs. 163 Cr vs. Rs. 76 Cr in Q4 FY25. Management guided more even quarterly distribution in FY27, implying structurally stronger H1 FY27 vs. H1 FY26. The execution capability is established — it is now scaling.

Q4 FY26: Rs. 1,097 Cr revenue (+60.5% YoY)

4 BOO Annuity Model — Hidden Asset Value

Rs. 4,433 Cr BOO OB at 12–13% project IRR (SPV level). MESDCL project alone: Rs. 2.19 lakh/MW/month; contributes Rs. 800–1,000 Cr revenue in FY27. Three of four BOO projects funded via IPO proceeds + internal accruals. Finance lease income Rs. 558 Cr recognised in FY26. CFO positive target: FY28. Annuity cashflows not priced in current EPC-style multiples.

BOO equity IRR: 13–14% | CFO+ve: FY28

5 Small-Cap Re-rating Potential

Recently-listed (FY26 IPO), limited institutional coverage, nascent analyst following. As BESS manufacturing revenues dominate FY27 P&L, market re-classification from "telecom EPC" to "energy manufacturer" is inevitable. Energy manufacturing peers trade at 20–35x P/E. Migration from 12.5x CMP to even 18x FY27E EPS implies Rs. 318 — well above our conservative Rs. 230 target.

Re-rating target: 15–18x FY27E P/E (base case 13x)

♦ ANALYST TAKEAWAY

Core thesis: Five independently compelling pillars — order book visibility, operating leverage, execution track record, BOO annuity income, and re-rating potential — all converge on the same conclusion: Rs. 230 is a conservative 12-month target.

06 FINANCIAL ANALYSIS — HISTORICAL PERFORMANCE

Particulars (Rs. Cr)	FY23A	FY24A	FY25A	FY26A	3Y CAGR
Revenue from Operations	503	2,435	2,439	2,641	73.8%
Gross Profit	142	556	715	677	68.5%
Gross Margin %	28.3%	22.8%	29.3%	25.6%	—
EBITDA	28	398	482	455	164.9%*
EBITDA Margin %	5.6%	16.3%	19.8%	17.2%	—
Finance Costs	12	112	115	60	—
PAT	17	230	279	307	164.9%
PAT Margin %	3.3%	9.4%	11.3%	11.4%	—
EPS (Rs.)	0.95	14.63	16.30	15.11	—
ROE %	4.9%	40.5%	23.1%	13.6%	—
Net Debt / Equity	nm	nm	Net Cash	0.09x	—

*PAT CAGR FY23–FY26. FY24 step-change driven by BSNL 4G Saturation Project. FY26 EBITDA margin dip reflects energy business mix (lower EBITDA % vs. telecom) and heavy investment year. D/E rise reflects BOO capex and BESS expansion. Finance cost halved post-IPO debt repayment + rating upgrade. Source: Investor Presentation June 2026, FY26 Concall, RHP restated financials.

Working Capital Note. FY26 receivables elevated (Rs. 2,442 Cr, +56% YoY) due to Q4-concentrated revenue and 90–120-day project billing cycles. Inventory up to Rs. 540 Cr — strategic stockpile of lithium cells ahead of China rebate changes (cells up ~20% from April-26). Management: Rs. 300 Cr collected Apr–May-26; normalisation expected by Sep-26. Net debtors/creditors gap ~Rs. 650 Cr at 90-day cycle — manageable. CFO positive target: FY28.

07 FINANCIAL FORECASTS — FY27E–FY29E (ANALYST ESTIMATES)

Particulars (Rs. Cr)	FY25A	FY26A	FY27E	FY28E	FY29E	FY26–29E CAGR
Revenue	2,439	2,641	3,300	4,100	4,800	22.0%
Revenue Growth %	0.2%	8.3%	25.0%	24.2%	17.1%	—
EBITDA	482	455	561	738	912	26.0%
EBITDA Margin %	19.8%	17.2%	17.0%	18.0%	19.0%	—
PAT	279	307	360	467	598	24.9%
PAT Margin %	11.4%	11.6%	10.9%	11.4%	12.5%	—
EPS (Rs.)	16.30	15.11	17.7	22.9	29.4	—

Key assumptions: FY27E revenue at midpoint of management guidance (Rs. 3,200–3,400 Cr); EBITDA margin 17.0% per CFO guidance (energy mix effect); PAT margin 10.9% per CFO guidance ("10–11%"); ~203.4 Cr shares. FY28E at midpoint of management guidance Rs. 4,000–4,200 Cr. FY29E is analyst estimate — no explicit guidance provided. Finance costs guided lower post-IPO at A-rated borrowing rates.

08 MANAGEMENT ASSESSMENT

Credibility & Track Record. Chairman & MD Mr. Venugopal Rao Maddisetty (20+ years, MBA USA) has navigated three business pivots — power → telecom → BESS — each timed ahead of structural demand inflections. The decision to advance to 10 GWh immediately (skipping the "wait and watch" approach at 5 GWh) reflects genuine demand-led confidence: *"We have advanced our plans considering the demand outlook and order book visibility."*

Capital Allocation. Rs. 819 Cr IPO proceeds deployed towards BOO project capex and manufacturing expansion. Three of four BOO projects funded through IPO / internal accruals — no new BOO commitments without external funding secured first. IPO funds not diverted to promoter payouts. Credit rating upgraded BBB- → A- in 12 months — third-party balance sheet validation.

Concall Consistency. Guidance maintained: FY27E Rs. 3,200–3,400 Cr ("maintained"), FY28E Rs. 4,000–4,200 Cr, PAT margins 10–11% FY27. Commissioning delayed by 2 months (not a full quarter) due to West Asia shipping disruption — an industry-wide event, not an execution failure. CFO granularity on receivables, lease accounting, and BOO unit economics was exceptional for a recently-listed small-cap. No auditor qualifications in RHP restated financials.

Key Watch. Promoter family constitutes executive management. Independent directors (ex-CSIR, ex-SBI, ex-SEBI) strengthen governance. FY27 delivery vs. guidance will be the first major listed-company execution test — we expect it to be met given order book lock-in.

♦ ANALYST TAKEAWAY

Financial trend: Revenue CAGR 73.8% (FY23–26); PAT CAGR 164.9%; EPS growing from Rs. 15.11 (FY26A) to Rs. 29.4 (FY29E). At CMP Rs. 189, stock trades at 10.7x FY27E EPS for a company with 22%+ earnings CAGR and 4.3x order cover.

Mgmt credibility: Above average for a newly-listed small-cap. Strategic decisions are demand-led, capital allocation is disciplined, financial communication is transparent and granular.

09 PEER COMPARISON MATRIX

Peer data is analyst estimate based on publicly available information — for benchmarking only. Pace Digitek at CMP Rs. 189.

Company	Mkt Cap (Cr)	Rev CAGR 3Y	EBITDA Mgn	PAT Mgn	ROE	FY27E P/E	EV/EBITDA	Segment
Pace Digitek	~3,846	73.8%	17.2%	11.4%	13.6%	10.7x	~9x	BESS Mfr + Telecom EPC
Genus Power Infra	~5,500	~25%	~14%	~9%	~18%	~22x	~16x	Smart Meters + Energy Infra
KPI Green Energy	~6,000	~60%	~30%	~18%	~25%	~20x	~18x	Solar Energy (C&I, IPP)
Waaree Energies	~70,000	~80%	~12%	~10%	~30%	~35x	~28x	Solar Module Mfr
Sterlite Technologies	~5,200	~5%	~16%	~4%	~8%	~25x	~12x	Optical Fiber / Telecom

Valuation Gap. Pace at 10.7x FY27E P/E vs. energy/manufacturing peers at 20–35x. Even adjusting for small-cap liquidity discount and a nascent listed track record, a 2–3x multiple discount for a company with India's largest BESS order book and 73.8% revenue CAGR is excessive. ROE moderation (13.6%) reflects IPO dilution and heavy capex year — not structural weakness. We believe 13–15x FY27E P/E is warranted, implying Rs. 230–265.

10 VALUATION — MULTI-METHODOLOGY APPROACH

A. DCF Valuation (Base Case)

Assumption	Value
WACC	13.5%
Terminal Growth Rate	5.0%
Forecast Period	FY27E–FY32E
Terminal EV/EBITDA	12x
Implied Value per Share	Rs. 220–235

WACC: $R_f 7\% + \text{Beta } 1.2 \times \text{ERP } 5.5\% = 13.6\%$, rounded to 13.5%.
Terminal growth 5% reflects infrastructure sector long-run GDP linkage.

C. EV/EBITDA

Metric	Value
FY27E EBITDA (Rs. Cr)	561
Target EV/EBITDA	10x
Enterprise Value (Rs. Cr)	5,610
Less: Net Debt FY27E (Rs. Cr)	~400
Implied Price per Share	~Rs. 256

10x EV/EBITDA = below peer range of 12–18x. Conservative discount for size and liquidity. Still implies meaningful upside.

B. Forward P/E

Metric	Value
FY27E EPS (Rs.)	17.7
Target P/E	13x
Implied Price	Rs. 230
FY28E EPS (Rs.)	22.9
FY28E Target P/E	12x
FY28E Implied Price	Rs. 275

13x FY27E P/E = 35–40% discount to energy mfr peer avg (~20–22x).
Conservative for a newly-listed small-cap. Further upside as coverage expands.

D. Valuation Reconciliation → Target Price Rs. 230

Method	Implied TP	Weight
DCF (Base Case)	Rs. 228	40%
Forward P/E (FY27E, 13x)	Rs. 230	40%
EV/EBITDA (FY27E, 10x)	Rs. 256	20%
Blended Target Price	Rs. 230	100%

Why Rs. 230 is reasonable: At 13x FY27E EPS with 22%+ earnings CAGR, the stock is 2x cheaper than comparable peers even at target price. This is the **conservative** base — bull case Rs. 336 if re-rating to peer multiples occurs.

♦ ANALYST TAKEAWAY — VALUATION

Why this valuation: Three independent methods (DCF Rs. 228, P/E Rs. 230, EV/EBITDA Rs. 256) converge around Rs. 230. Even the most conservative method (DCF) implies 21% upside from CMP Rs. 189. The valuation is anchored by a 35–40% discount to manufacturing sector peers — justified by small-cap / early-listed factors, but NOT by business fundamentals.

11 RISK ANALYSIS

Risk	Prob.	Impact	Mitigating Factors
Lithium cell price spike / China rebate reversal	Medium	High	Rs. 540 Cr strategic inventory stockpile at older prices (benefits Q1 FY27). Price contingencies built into all bids per CFO. Cell mfr backward integration underway.
Customer concentration (top 3 ~89% of FY25 rev)	Low	High	All PSU counterparties with contractual commitments. Diversification accelerating — FY26 energy adds NTPC, SECI, NLC, DVC. Average customer tenure 4–6 years.
EBITDA margin compression (energy mix effect)	High	Medium	Already guided by management (PAT 10–11% FY27). Manufacturing revenue shift improves margins from FY28. In-house container fabrication adds 4–5%. Temporary and priced into guidance.
Execution delays (commissioning, shipping)	Medium	Medium	Equipment received, installation underway. Govt force majeure provisions allow 2–4 month extension. 200+ in-house engineers. Prior delay was 2 months, not a structural issue.
Competition intensification in BESS manufacturing	High	Low	Pace at 10 GWh Oct-26 vs. competitors building 5 GWh later in CY26. 1.5-yr operational track record (178 containers, 480 MWh). L&T chose Pace over China — capability moat is real.

♦ ANALYST TAKEAWAY — RISK

Risk/reward: Bull +78% vs. bear –31% from CMP Rs. 189. ~2.5:1 asymmetry. Each major risk has a clear mitigation or is temporary. None justifies the 50–60% discount to energy manufacturing peers at which Pace trades today.

12 SCENARIO ANALYSIS

The official recommendation (BUY, TP Rs. 230) is based on the Base Case scenario.

▲ Bull Case	► Base Case (Official)	▼ Bear Case
FY27 Revenue Rs. 3,600 Cr	FY27 Revenue Rs. 3,300 Cr	FY27 Revenue Rs. 2,700 Cr
Rev CAGR FY26–28 ~28%	Rev CAGR FY26–28 ~25%	Rev CAGR FY26–28 ~12%
EBITDA Margin 18–19%	EBITDA Margin 17.0%	EBITDA Margin 15–16%
FY27E EPS Rs. 21+	FY27E EPS Rs. 17.7	FY27E EPS Rs. 13
Target Multiple 19x FY27E P/E	Target Multiple 13x FY27E P/E	Target Multiple 10x FY27E P/E
Target Price Rs. 336	Target Price Rs. 230	Target Price Rs. 130
Upside vs CMP +78%	Upside vs CMP +22%	Downside vs CMP –31%
Triggers: 10 GWh at 85%+ utilisation; cell mfr announced; NEC Africa orders materialise Q1 FY27; C&I revenues above expectation; re-rating to peer multiples occurs faster than expected.	Assumptions: Management guidance achieved; historical execution continues; peer-consistent discount multiple; working capital normalises by Sep-26 as guided by CFO.	Triggers: Significant cell price surge erodes margins; 10 GWh commissioning delayed further; PSU order cancellations; working capital strain worsens; multiple compression to 10x.

13 EARNINGS BRIDGE & RE-RATING FRAMEWORK: CMP RS. 189 → TARGET RS. 230

14 CONCLUSION

BUY Initiation of Coverage	Rs. 230 12-Month Target Price	+22% Upside from CMP Rs. 189	Rutuja Tajne Equity Research Associate 15 June 2026
WHY THIS COMPANY India's first vertically-integrated BESS platform: cell-to-pack-to-container manufacturing, integrated PCS/EMS, grid-scale EPC, BOO asset ownership — all in one. Largest BESS order book among individual Indian companies. 18+ years of government execution relationships. L&T validation. First-mover with 1.5-year operational track record nobody else has.	WHY NOW Manufacturing capacity quadruples in the next 5 months. Six concurrent catalysts crystallise within 12 months. The stock is priced on telecom EPC multiples (~12.5x) while transforming into an energy manufacturer (deserves 18–22x). The re-rating inflection happens as FY27 execution evidence arrives — enter before, not after.	WHY AT THIS VALUATION Rs. 230 implies only 13x FY27E EPS — 35–40% below energy manufacturing peer average. Three valuation methods (DCF Rs. 228, P/E Rs. 230, EV/EBITDA Rs. 256) all support this target. Risk/reward is asymmetric: bull Rs. 336 (+78%) vs. bear Rs. 130 (–31%). The multiple gap to peers is not justified by fundamentals.
